

## Do you take the windows away to work on them?

We mostly carry out our work in front of the windows but components, new joinery, sashes, new sills etc are manufactured in our workshop and taken to the premises for installation. Most of our machines have extract devices and we fit dust sheets over carpets and flooring adjacent to the windows. We ask that occupants remove curtains, ornaments, furniture and other obstructions away from windows and doors which our installers need to work on. Each window is fitted back into its frame at the end of the working day and the property is left secure.
